- Selenium, Espresso
- Postman (REST/CRUD)
- AWS: CodePipeline, Cloudwatch, Lambda, ElasticSearch
- Atlassian: Jira, Confluence
- Github, Gitlab
- Zoom Conference, Google Meets, Slack
- Unity3D

Summary

Software QA Engineer, functional testing technician, Git, Jira, and AWS release manager.

I'm also a musician, cook, PC hobbyist, bookworm, and video game enthusiast.

Work Experience

Quality Logic | Engineer | *March 2020 - Present*
Automation engineer for an Android project, using Kotlin, Espresso, and JUnit
- Develop test cases using Espresso and JUnit to automate the user journeys within an Android application
- Communication with project managers and the application development team

Quality Logic | Testing Technician and Release Manager | *March 2018 - March 2020*
Functionally tested the logic and UI/UX of a website, managed sprint releases, and wrote test case technical documentation
- Managed the deployment of tickets from QA and staging environments to the production website, using tools such as Git, AWS, and Jira
- Tested the logical functions of the website using methods like smoke and sanity tests, regression tests, and ad hoc testing
- Wrote test case technical documentation detailing the functionality of the website
- Trained team members on multiple aspects of the site, and web development in general, e.g. REST/CRUD methods, API requests, etc.
